(54) Title: A SYSTEM FOR SECURING THE FLOW OF AND SELECTIVELY MODIFYING PACKETS IN A COMPUTER NETWORK

## (57) Abstract

A novel system for controlling the inbound and outbound data packet flow in a computer network by which private networks can be secured from outside attacks. A user generates a rule base (400) which is converted into a set of filter language instructions where each rule includes a source, destination, service, whether to accept or reject the packet and whether to log the event. The filter language instructions are executed on inspection engines (204) on computers acting as firewalls (124) positioned in the network such that all traffic is forced to pass through the firewall. Packets are filtered in accordance with the rule base. The inspection engine acts as a virtual packet filter machine (600) determining whether to accept or reject a packet. If a packet is rejected, it is dropped, and if accepted may be modified. Modifications, performed in accordance with the rule base, may include encryption, decryption, signature generation or verification, or address translation.

## INTERNATIONAL SEARCH REPORT

International application No.  
PCT/IL96/00017**Box I Observations where certain claims were found unsearchable (Continuation of item 1 of first sheet)**

This international report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1. ☐ Claims Nos.:  
because they relate to subject matter not required to be searched by this Authority, namely:
2. ☐ Claims Nos.: 26 (2nd Clm numbered 12)  
because they relate to parts of the international application that do not comply with the prescribed requirements to such an extent that no meaningful international search can be carried out, specifically:  
  
The claim is indefinite in that it fails to point out what is included or excluded by the claim language. This claim is an omnibus type claim.
3. ☒ Claims Nos.: 26 (2nd Clm numbered 12)  
because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).

**Box II Observations where unity of invention is lacking (Continuation of item 2 of first sheet)**

This International Searching Authority found multiple inventions in this international application, as follows:

1. ☐ As all required additional search fees were timely paid by the applicant, this international search report covers all searchable claims.
2. ☐ As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
3. ☐ As only some of the required additional search fees were timely paid by the applicant, this international search report covers only those claims for which fees were paid, specifically claims Nos.:
4. ☐ No required additional search fees were timely paid by the applicant. Consequently, this international search report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:

Remark n Protest

☐

The additional search fees were accompanied by the applicant's protest.

☐

No protest accompanied the payment of additional search fees.
